

## **TUTORIAL: PROJECT MANAGEMENT**

Projects are a new organizing tool that will become active with completion of the next baseline data update. Each Project will serve as a container for Forecasts such that each forecast will be associated with one, and only one, Project. The Model upon which a Forecast is based will also be automatically associated with the Project with which that Forecast is associated. A Model can be associated with an unlimited number of Projects.

The Project Management screen is used to create and manage Projects. When signed-in, any user can navigate to the Project Management screen by clicking the "Project" top menu item. Once Project functionality is available for use, a detailed tutorial will be available.
